SUMMARY

Software Engineering student specializing in automation and AI. Winner of regional and state robotics competitions, with experience in developing functional prototypes (IoT and robotics). Proficient in Python, C#, and SQL, with solid experience in data analysis and technical problem-solving.

I am characterized by a proactive attitude and a commitment to continuous learning, as well as my ability to adapt to changing technological environments. I consider myself to have strong analytical thinking, effective communication, and teamwork skills, and I demonstrate a constant interest in emerging technologies, especially artificial intelligence, contributing value in both academic and professional settings.

SKILLS

TECHNICAL SKILLS

- Programming Languages: C#, Python, Java
- Web Development: HTML, CSS, JavaScript
- Databases: SQL, relational database design
- Tools & Development Environments: Visual Studio, Visual Studio Code, Command Line
- Hardware & Embedded Systems: Arduino, microcontrollers, sensors integration
- Software Concepts: Object-Oriented Programming, Software Architecture, Modular Design
- Methodologies: Agile Development, Scrum

ADDITIONAL SKILLS

- Design & UI Tools: Figma, Canva, Adobe Photoshop
- Artificial Intelligence Tools: Use of AI tools for programming support, documentation, and workflow optimization

PROFESSIONAL SKILLS

- Problem Solving
- Technical Documentation
- Teamwork
- Time Management

CERTIFICATIONS AND COURSES

- **Association of Applied Robotics and Technology Sciences (UNAM): Certification** in Advanced Robotics and Home Automation.
- **Association of Applied Robotics and Technology Sciences (UNAM): Certificate** of Participation in Arduino + Processing Development.
- **PH4 Bionics: Certificate** in 3D Biomechanical Prosthetics.
- **Database Course: Relational** modeling, SQL, queries, normalization, and database management.
- **Advanced Excel Course: Data** analysis, advanced formulas, pivot tables, and basic automation.
- **Figma Course: UI/UX** design, interactive prototyping, and user-centered design.
- **Canva Course: Digital** design, visual content creation, and branding for digital platforms.
- **Advanced Artificial Intelligence Usage Course: Practical** training focused on the advanced use of AI tools for problem-solving, software development support, data analysis, automation, and productivity optimization.

EDUCATION

 Tecmilenio University

Software development engineer 2023-2027

- GPA: 3.6 / 4.0 (9.0 / 10 Mexican scale)

LANGUAGES

Spanish: Native. | English: Intermediate / Advanced (B2). | French: Basic.

WORK EXPERIENCE

Freelance Web & POS Systems Developer 2025 – 2026

- **Full-Stack Development:** Developed customized Point of Sale (POS) systems and websites for diverse businesses using Python, SQL, HTML, and CSS.
- **Process Optimization:** Streamlined sales processes and inventory management through automated digital solutions, enhancing overall business presence.

JPS Industrial Catering | Data & Web Developer 2025

- **Financial Management:** Managed company finances and inventory tracking using advanced Excel, ensuring 100% accuracy in daily operational reporting.
- **Web Development:** Designed and launched the company's official website to improve digital communication and client engagement.
- **Strategic Communication:** Coordinated directly with supervisors to manage service reports and optimize inventory flow.

Robotics Instructor 2022 – 2024

- **Technical Mentorship:** Delivered personalized curriculum in programming, electronics, and automation, focusing on hands-on project learning.

Summer Camp Staff 2024

- **Team Leadership:** Supervised groups and executed educational activities, promoting teamwork and positive social interaction in a dynamic environment.

HONORS & AWARDS

1st Place – Mathematical-Technological Competition

Developed a functional seismograph prototype integrating sensors, mathematical modeling, and custom software.

1st Place – State Robotics Competition

2nd Place – Regional Robotics Competition

Participant – ICPC University Programming Competition

PROJECTS

Point of Sale (POS) System

Developed a POS system for small businesses including sales tracking, inventory management, and reporting modules using Python, SQL, HTML, and CSS.

Seismograph Prototype

Built a sensor-based seismic data system capable of converting wave signals into interpretable data using mathematical modeling and custom software.

Automated Conveyor Belt System

Designed an automation prototype capable of sorting objects using multiple sensors and programmed control logic.
